

Preventive Healthcare and Wellness

Onsite Healthcare

Comprehensive Diagnostic Testing and Screening

Preventive healthcare represents the future to saving lives through early detection. Our goal is to identify disease and arrange medical treatment before it's too late. When you schedule your appointment our main goal is to identify disease through a variety of diagnostic screening tests.

Our Wellness and Preventive Medical Program is **UNIQUE** in that we offer state of the art technology designed to detect disease early enough to allow the participant the opportunity to obtain treatment before it's too late.

We are at the forefront of this technological revolution. Understanding when and how to use these new tools can be a challenge even for well-versed specialists. We take the guesswork out of it.

Onsite diagnostic testing has become an increasingly popular tool for doctors to become more accurate and effective in treating their patients. We only use the latest machines ensuring accurate outcomes.

The overall impact on your group is substantial. Your group will have access to a wide variety of diagnostic machines and services offering all participants the opportunity to address their medical needs. All test results are mailed directly to the participant ensuring confidentiality. All participants are encouraged to take their test results to their primary care doctor.

We look forward to discussing our services further with your organization. Please feel free to contact us if you have any questions regarding our service. (718) 413-5040.
