FAQ – Frequently asked Questions (and Answers)

Q: Who needs to be screened? Am I too young?

A: Every adult should be screened. It is one of the first steps on the Path to Good Health. Age is not a factor. We should all have baseline tests to confirm our good health. Our tests can alert you to risk factors so “issues” can be addressed early, before they develop into a “problem”. Be proactive about your health. You have great reasons to stay healthy!

Q: How long does the Testing take?

A: Generally, after registration is completed, it takes 40-45 minutes to do the full screening.

Q: Is my personal information protected and kept confidential?

A: Yes, we are HIPAA compliant; your personal health information is kept secure and confidential.

Q: Who gets my test results?

A: When you register for testing you will be asked where you want your test results sent. You may choose to have them sent directly to you at your home address. You are then able to share the results with your personal physician if you wish. We follow HIPAA Privacy Rules and Medical Test Results are never shared with your Employer, your Medical Health Insurance Provider, or anyone else, unless you specifically request it.

Q: Will I do a full screening? Do I have to do the full screening?

A: One of our board certified doctors will determine which tests are recommended for you, based upon the personal health history you provide, your family health history and his one on one meeting with you. You may choose to do all the doctor recommended tests or opt out of some tests. We only do the tests you want.

Q: I need an Employee Health Screening / Examination for work. Will your doctor certify it for me?

A: Yes, if you make the staff aware of the form when you register and you complete the screening, our doctor will certify your annual and assessment screening form.

Q: Can I bring other family members / friends in to have the screening done?

A: Yes, as long as your employer allows visitors on site, we welcome you to invite other adults (spouse, parents, adult children, friends, etc.) to come in for testing as well.

Q: Does this affect my ability to see my personal physician for an annual physical?

A: No, in fact we encourage you to see your personal physician after you receive all your test results. By providing the results directly to you, you then have the ability to fully review them with your personal doctor, discuss any concerns and take the steps to ensure you are on the Path to Good Health.

Q: Why is it better to do this through this Wellness Program vs. my personal doctor?

A: Since these Tests are done as Early Preventive and Wellness Screenings we are able to provide you with many Tests, more than your personal physician does from his/her office at one visit. Your doctor would need to send you to multiple specialists, over multiple days, for all the tests we have available to you.

We are able to do all the Tests for you in about one hour, on one day, at one location.

PATIENTS MUST BRING THEIR HEALTH INSURANCE CARD AND PHOTO ID ON THE DAY OF TESTING
